HIGH SECURITY SAFES

HS Series

Most safes offer either burglary or fire resistance, rarely both, especially in this class. The all new VSR HS SERIES is designed and constructed to sufficiently withstand both! The safe's frame enclosing the door is uniquely designed in such a way that it does not permit heat or hot air to pass through the gaps of the door jamb area in case of a fire making an exceptional fire resistant safe. The overall body is enclosed with a superior composite material giving it characteristics of a high security burglary safe. Perfect for storing both valuables and documents.

DOOR

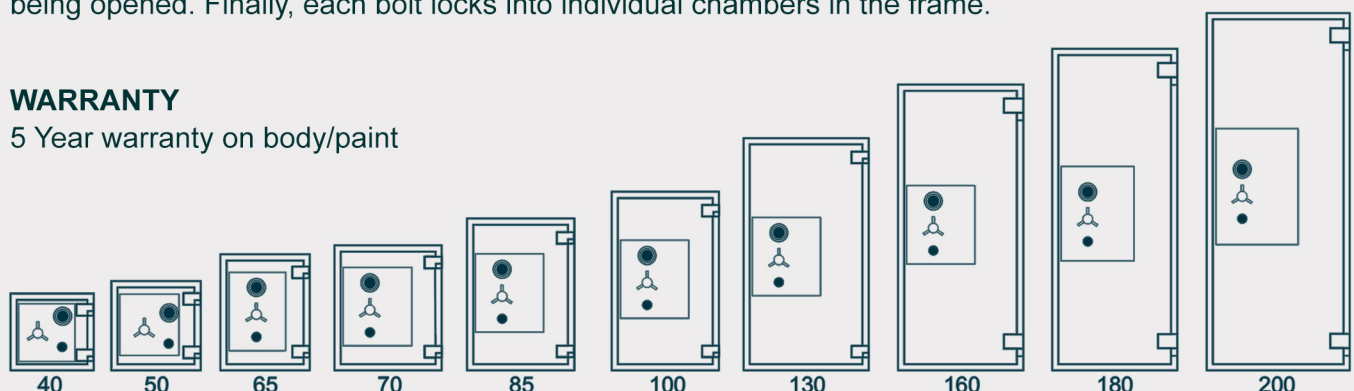

The HS body is constructed of inner and outer Electronically welded steel plates including our "Z" reinforcement bars cover the entire door. A manganese hardened steel plate protects the lock and mechanism area from drilling. The door has an overall thickness of 5 ½ (140 mm). The combination of the barrier materials provides the door a unique strength to protect against excessive burglary attacks.

BOLTWORK AND RELOCKING MECHANISM

The patented 3 way, laser-cut locking mechanism activates massive 1 3/8" (35 mm) bolts. Static bolts secure the door on the hinge side. A glass plate protects the vital mechanism area. An attack by tool, torch or explosives will shatter the glass activating the relocking devices thus preventing the safe from being opened. Finally, each bolt locks into individual chambers in the frame.

WARRANTY

5 Year warranty on body/paint
